[The Canard Aviators's Mailing list]

I stumbled today on a very interesting lighting system in a bicycle shop. It's called Nitelite. The web site is [<http://www.night-sun.com>]. The salesman gave us a demo and we were almost blinded in daylight conditions. The housing is 1.5" X 3" and holds two halogen lights. It comes with 1"X2" control unit that gives you: alternating flasher mode SOS beacon, repeating beacon, soft start to prolong bulb life, low battery warning, automatic switching to the other bulb if one burns an 4 levels of intensity.

If someone is close to a mountain bike shop check it out and give us a second opinion. Myself: I think it has potential for our airplanes.
