

A CURE FOR ACCIDENTAL NOSE GEAR RETRACTION!

OVERVIEW

After years of flying my VariEze with a piece of nylon cord looped around my nose gear crank handle to keep it from creeping and thereby experiencing an unwanted nose gear extension or retraction, I resolved to arrive at a better solution when constructing my Cozy. The enclosed mechanism is the result of a lot of experimenting. It should work equally as well on a VariEze, Long-Ez, or a Cozy. You may want to paint it before installation, since the aft face is exposed. Please read through the instructions and study the sketches so that you have "the picture" before starting. The instructions assume a retrofit.
