Evolution 3 fabric protects with no-compromise performance.

Water resistant – Water tends to run right off Evolution 3 fabric without being absorbed by the fabric fibers so it dries quickly and completely. Because it's naturally water resistant, Evolution 3 fabric protects without relying on the short-term effectiveness of special chemical treatments or finishes.

Breathable – You can actually breathe through Evolution 3 fabric. Moisture under the cover can evaporate to protect against paint damage and rust. Breathable circulation also helps heat from becoming trapped and causing both interior and exterior damage.

Soft and thick – Evolution 3 fabric is soft and non-abrasive so it will not scratch, mar or dull auto paint, even delicate clearcoat finishes. Four-layer thickness helps to protect against hail and parking-lot nicks better than traditional woven fabrics.

Tough and durable – Evolution 3 fabric has a unique construction that resists rips, tears and punctures better than traditional woven fabrics.

Resists elements – Evolution 3 fabric is resistant to acid rain, bird droppings, tree sap, salt, dirt and other common outdoor substances.

Resists stains – Common stains wipe off with plain water or with a mild non-detergent soap and a thorough rinsing.

Any-temperature performance – From sizzling summers to way-below-zero winters, Evolution 3 fabric stays soft, pliable and delivers outstanding protection.

No rot, no mildew – Evolution 3 fabric will not rot or be damaged by mildew, even if stored wet.

No shrink, no stretch – Even after aging, Evolution 3 fabric will not shrink or stretch to assure a car cover that stays taut, neat and snug-fitting.

No odors – Evolution 3 fabric has no inherent odors and will not retain odors from outside sources.

Easy to repair – Rips, tears and punctures can be easily repaired by sewing or gluing.

A weather note – The effects of weather (sun exposure, etc.) on the useful life of Evolution 3 fabric, as with any outdoor fabric, will vary with geographic location and use pattern.

What is Evolution[®] 3 fabric?

The result of Kimberly-Clark's innovative leadership in nonwoven fabric technology, Evolution[®] 3 fabric features a unique construction containing four layers of polypropylene. The outside layers are formed from long, continuous filaments that provide strength and durability. Sandwiched in the middle is the two-layer moisture barrier containing short, dense fibers formed to keep out water yet allow for the passage of air. These middle layers are naturally water resistant, so surface treatments are not necessary.

General properties

- Water resistant
- Extremely breathable
- Soft, non-abrasive
- Lightweight
- Will not rot or mildew and is undamaged by acid rain, bird droppings, tree sap, salt, dirt and other outdoor elements
- Remains pliable, regardless of outside temperature
- Tear and puncture resistant
- Stain resistant (most common stains wash off with soap and water)
- Will not shrink
- Will not stretch

- Odorless and will not retain odors from other sources
- Sewable
- Heat sealable
- Easy to repair
