LEZ-410	PROPELLOR COVER, 3 blade	1	265.00

The Canopy Cover encloses the windshield, side windows and canopy roof, and it is custom sewn to fit each airplane according to antennae and temperature probe placements. Where necessary a pocket is sewn into the cover for the temperature probe, and pockets or reinforced holes are added for VHF ("stick" or "fin" type) antennae. Covers are made to fit around ADF or VOR ("V" type) antennae by placing a Velcro closure down the side of the canopy cover from the antenna base. Each cover is trimmed at the corners to match the colors of the airplane, and the airplane's registration number can be imprinted onto both sides of the cover. A color-matched duffle bag and complete instructions are included with each cover.

Each canopy cover is made of nylon Silver Laminate. Bruce's Custom Covers developed Silver Laminate especially for aircraft protection. The outer material is a medium weight nylon treated for ultraviolet resistance and anti-static buildup. The inner lining is brushed nylon tricot knit. Silver Laminate is extremely reflective. Tests show that the cabin interior temperature can be reduced by as much as 25 degrees. It is water, ice and snow repellent, yet it is breathable enough to allow moisture to escape from between the cover and the windshield surface. Silver Laminate contains no hydrocarbon compounds which can harm plexiglass windshields and acrylic finishes.

NOTE: Prices are current as of November 8, 2011.

This is a complete list of all currently available items for this aircraft, but if you don't see what you need, please call.
