VARIEZE WINGS

Dear Customer:

We are in the final stages of tooling and detail design for fabrication of wings and center section spar for the VariEze. By April 1978 we should have the first wings out of the molds and static testing should be completed. Soon, thereafter, we plan to flight test (performance and flutter tests) a set of wings before Oshkosh this year. At this time the plan is to provide the homebuilder with a set of structurally complete wings mated to the center section.

The wing structure and the wing fittings will differ from the plans and be similar to well proven sailplane design.

We will provide the ailerons as part of the wing structure. The aileron is to be cut out and will have to be finished by the homebuilder.

The winglets will not be supplied at this time.

The contours will be to sailplane standards.

The wings will be stronger, stiffer and lighter than can be produced by the homebuilder by following the plans.

If inspection procedures from the F.A.A. permit, the wings will be provided with a UV barrier and a white Gel-Coat on the outside. In the case, only minor work will be required to completely finish the wings to the highest standards.

We are aiming to provide these parts for less than \$2500.00. Should you be interested, please send us a self addressed stamped envelope for WINGS and we will give you all details available at that time.

It is somewhat premature but due to customer pressure to establish a priority delivery schedule, we are accepting \$250.00 refundable deposits, ONLY if the following conditions cannot be met:
