## Design Change Notification: Electrak® Pro Linear Actuators

**Date:** July 23, 2018

Dear valued customer,

We are writing to announce that the Thomson engineering team has successfully implemented new design changes that will impact all current Electrak Pro linear actuator part numbers effective September 4, 2018. As part of our commitment to continuous improvement, the team completed this product enhancement project, which focuses on the actuators' robustness and sealing without altering its functionality. Enhancements include:

- The actuator housing has been expanded 1.2 mm in every direction, while the retracted length dimension remains the same.
- The bi-directional rear clevis has been replaced by a uni-directional rear clevis.
- The Electrak Pro design is now rated for IP66, IP67 and IP69K.

New part numbers for these models also will be implemented on September 4. Electrak Pro actuators previously ordered with a part number starting with PR12 or PR24 will now be ordered with PN12 or PN24.

We are confident that this design and part numbering update will improve our product offering to you, our valued customer.

If you have any questions regarding this product enhancement, feel free to reach out to our Customer Support team at [thomson@thomsonlinear.com](mailto:thomson@thomsonlinear.com) or (540) 633-3549.

Sincerely,

**Håkan Persson**  
Global Product Line Director - Actuators
